

D71

D71 118 616.233 PN10/16 DN40-300
Y-strainer flanged

Size : DN 40 to DN 300
Ends : Flanges R.F. PN10/16
Min Temperature : - 10°C
Max Temperature : + 80°C
Max Pressure : 16 Bars up to DN200
Specifications : Removable stainless steel filter
Bolted bonnet with draining cap
Epoxy painting

Materials : Cast iron body

D71

D71 118 616.233 PN10/16 DN40-300 Y-strainer flanged

SPECIFICATIONS :

- Removable stainless steel filter
- R.F. flanges PN10/16
- Horizontal or vertical position with descendant fluid (respect the flow direction indicated by the arrow)
- Mesh 1 mm from DN40 to 50, 1.25 mm from DN65 to 80 and 1.6 mm from DN100 to 300
- Bolted bonnet with draining cap threaded BSP
- Possible to equip with a draining valve (Ref.528)
- Epoxy painting 150 μ thickness, blue color RAL 5005

USE :

- For watering, water treatment and irrigation
- Min Temperature Ts : - 10°C
- Max Temperature Ts : + 80°C
- Max Pressure Ps : 16 bars up to DN200, 10 bars over

HEAD LOSS GRAPH :

D71

D71 118 616.233 PN10/16 DN40-300 Y-strainer flanged

RANGE :

- Y strainer R.F. flanges PN10/16 from DN 40 to DN 300 Ref.233
- Y strainer R.F. flanges PN10/16 with draining valve NF from DN 40 to DN 300 Ref.233043 to 233304
- Draining valve NF Male – Female Ref. 528004 DN 1/2" for DN 40 to DN125 and 528005 DN 3/4" for DN150 to 300

Example of filter with draining valve :

MATERIALS :

Item	Designation	Materials
1	Body	Cast iron EN GJL-250
2	Filter	AISI 304
3	Bonnet	Cast iron EN GJL-250
4	Bonnet gasket	EPDM
5	Draining cap	AISI 304
6	Bolting	AISI 304

D71

D71 118 616.233 PN10/16 DN40-300 Y-strainer flanged

STANDARDS :

- Fabrication according to ISO 9001 : 2008
- DIRECTIVE 2014/68/EU : Products excluded (article 4, § 3)
- Pressure tests according to EN 12266-1
- Length according to EN 558 Series 1 (DIN 3202 F1 – NF 29354)
- Flanges R.F. according to EN 1092-2 PN10/16
- French water agreement **A.C.S. N° 12 ACC LY 612**

INSTALLATION POSITIONS :

Vertical position (descendand fluid)

Horizontal position

Y-strainer flanged**

INSTALLATION INSTRUCTIONS

GENERAL GUIDELINES :

- Ensure that the strainers to be used are appropriate for the conditions of the installation (type of fluid, pressure and temperature).
- Be sure to have enough valves to be able to isolate the sections of piping as well as the appropriate equipment for maintenance and repair.
- Ensure that the strainers to be installed are of correct strength to be able to support the capacity of their usage.
- **Installation of all circuits should ensure that their function can be automatically tested on a regular basis (at least two times a year).**

INSTALLATION INSTRUCTIONS :

- **Before installing the strainers, clean and remove any objects from the pipes** (in particular bits of sealing and metal) which could obstruct and block the strainers.
- **Ensure that both connecting pipes either side of the strainer (upstream and downstream) are aligned (if they're not, the strainer may not work correctly).**
- **Make sure that the two sections of the pipe (upstream and downstream) match, the strainer unit will not absorb any gaps. Any distortions in the pipes may affect the tightness of the connection, the working of the strainer and can even cause a rupture.** To be sure, place the kit in position to ensure the assembling will work.
- Make sure flanges are cleaned.
- **If sections of piping do not have their final support in place, they should be temporarily fixed. This is to avoid unnecessary strain on the strainer.**
- Tighten the bolts in cross.
- The pressurisation must be increased gradually.
- So that the maintenance operations could be easily done, place a stop valve before and after the strainer. Thereby, the strainer could be isolated. During this operation, ensure to have a new bonnet gasket to avoid a leakage during the restarting.
- **Fluids in the strainer must not contain solid objects (it could damaged the seat).**
