

V46

V46 131.414 class800 DN3/8" – DN2"
Globe valve threaded BSP

Size : DN 10 to 50 (NPS 3/8" to 2")
Ends : Female - Female BSP or NPT, Socket Welding
Min Temperature : - 29°C
Max Temperature : + 538°C for SS (+ 425°C for carbon steel)
Max Pressure : 138 Bars (Class 800)
Specifications : Rising rotating stem (OS&Y)
Bolted bonnet and gland pack
Standard port

Materials : Carbon steel or Stainless steel

V46

V46 131.414 class800 DN3/8" – DN2" Globe valve threaded BSP

SPECIFICATIONS :

- Respect the flow direction (indicated by the arrow)
- Standard port
- Rising rotating stem (OS&Y)
- Bolted bonnet and gland pack
- Forged Carbon steel or stainless steel
- ½ stellite (Trim 8) for carbon steel valves
- Trim 10 standard SS 316 for stainless steel types
- Class 800

USE :

- Petroleum industry, steam, high pressure
- Min and max Temperature Ts : - 29°C to + 538°C for SS types Ref.452/453
- Min and max Temperature Ts : - 29°C to + 425°C for carbon steel types Ref. 412/413/414
- Max Pressure Ps : 138 bars (see graph)

FLOW COEFFICIENT Kvs (M3 / h) :

DN	10	15	20	25	32	40	50
NPS	3/8"	1/2"	3/4"	1"	1"1/4	1"1/2	2"
Kvs (m3/h)	1.2	1.3	3.3	5.9	9.5	12.4	21.6

PRESSURE / TEMPERATURE RELATION FOR CARBON STEEL VALVES REF. 412/413/414 :

V46

**V46 131.414 class800 DN3/8" – DN2"
Globe valve threaded BSP**

STANDARDS :

- Fabrication according to **ISO 9001 : 2008**
- **DIRECTIVE 97/23/CE : CE N° 0036**
Risk category III module H
- Designing according to **ISO 15761** and **API 602 8th**
- Pressure tests according to **API 598, table 6**
- Approval certificate Russian Federation **GOST-R**
- Valves approved by the main oil industries (certificates on request)
- **ATEX Group II Category 2 G/2D Zone 1 & 21 Zone 2 & 22** (optional marking)
- Threaded female BSP cylindrical ends according to **ISO 7-1 Rp**
- Threaded female NPT ends according to **ANSI B1.20.1**

INSTALLATION INSTRUCTIONS

GENERAL GUIDELINES :

- Ensure that the valves to be used are appropriate for the conditions of the installation (type of fluid, pressure and temperature).
- Be sure to have enough valves to be able to isolate the sections of piping as well as the appropriate equipment for maintenance and repair.
- Ensure that the valves to be installed are of correct strength to be able to support the capacity of their usage.
- **Installation of all circuits should ensure that their function can be automatically tested on a regular basis (at least two times a year).**

INSTALLATION INSTRUCTIONS :

- **Before installing the valves, clean and remove any objects from the pipes** (in particular bits of sealing and metal) which could obstruct and block the valves.
- **Ensure that both connecting pipes either side of the valve (upstream and downstream) are aligned** (if they're not, the valves may not work correctly).
- **Make sure that the two sections of the pipe (upstream and downstream) match, the valve unit will not absorb any gaps. Any distortions in the pipes may affect the tightness of the connection, the working of the valve and can even cause a rupture. To be sure, place the kit in position to ensure the assembling will work.**
- **During welding operation, for S.W. types half open the valve and do not exceed 350-400°C**
- The theoretical lengths given by ISO/R7 for the tapping are typically longer than required, the length of the thread should be limited, and **check that the end of the tube does not press right up to the head of the thread.**
- **Never use a vice to tighten the fixings of the valve.**
- **If sections of piping do not have their final support in place, they should be temporarily fixed. This is to avoid unnecessary strain on the valve.**
- It may be necessary to screw the packing gland during using according to the type of use.
- **Do not use a tool to shut the valve**
- **Fluids in the valve must not contain solid objects (it could damaged the seat).**
- It's recommended to operate the valve (open and close) 1 to 2 times per year
